

Primostar Group AS Registers a Patent in the United Arab Emirates

Primostar Group AS announces that the company has been granted a patent (No. 8134) in the United Arab Emirates. The invention, titled 'Rupture Element in Concrete Structures', is a special profile that enables the creation of controlled cracking points in reinforced concrete. This ensures predictable behavior of the structure and controlled crack locations, without reducing its overall strength.

The patent, registered on April 17, 2025, grants Primostar exclusive rights to use and license the solution. It strengthens the company's international competitive position and creates a stronger foundation for partnerships and exports in the Middle East and beyond.

Indrek Uusalu, CEO, commented:

"This patent marks an important milestone in our growth story. It confirms our team's creativity and dedication to developing solutions that make construction more durable and environmentally sustainable. The patent reinforces our position as a leading provider of white tank technology in the Baltics and Nordics, while opening new opportunities for international partnerships."

Patent No. 8134 was registered under the name WPM Estonia OÜ, which is the former name of Primostar Tootmine OÜ, and therefore fully belongs to the Primostar Group corporate structure. The inventor is listed as Indrek Uusalu.
